Basic Python

1. Split this string

```
s = "Hi there Sam!"
x=s.split()
print(x)
```

```
['Hi', 'there', 'Sam!']
```

2. Use .format() to print the following string.

Output should be: The diameter of Earth is 12742 kilometers.

```
planet = "Earth"
diameter = 12742
print("The diameter of {planet} is {diameter}
kilometers".format(planet="Earth",diameter=12742))
```

```
The diameter of Earth is 12742 kilometers
```

3. In this nest dictionary grab the word "hello"

```
d = {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':
[1,2,3,'hello']}]}]}
print(d['k1'][3]['tricky'][3]['target'][3])
```

```
hello
```

Numpy

```
import numpy as np
```

4.1 Create an array of 10 zeros?

4.2 Create an array of 10 fives?

```
a=np.zeros(10)
print(a)
```

```
[0. 0. 0. 0. 0. 0. 0. 0. 0. 0.]
```

```
b=np.ones(10)*5
print(b)
```

5. Create an array of all the even integers from 20 to 35

```
c=np.arange(20,35,2)
print(c)
```

```
[20 22 24 26 28 30 32 34]
```

6. Create a 3x3 matrix with values ranging from 0 to 8

```
d=np.arange(0,9).reshape(3,3)
print(d)
```

```
[[0 1 2]
 [3 4 5]
 [6 7 8]]
```

7. Concatenate a and b

```
a = np.array([1, 2, 3]), b = np.array([4, 5, 6])
a=np.array([1,2,3])
b=np.array([4,5,6])
e=np.concatenate((a,b),axis=None)
print(e)
```

```
[1 2 3 4 5 6]
```

Pandas

8. Create a dataframe with 3 rows and 2 columns

```
import pandas as pd
data=[['ram',21],['nick',22],['dom',26]]
f=pd.DataFrame(data,columns=['name','age'])
print(f)
```

```
   name  age
0   ram   21
1  nick   22
2   dom   26
```

9. Generate the series of dates from 1st Jan, 2023 to 10th Feb, 2023

```
dates=pd.date_range(start='1-1-2023',end='2-10-2023')
for val in dates:
  print(val)
```

```

```

10. Create 2D list to DataFrame

```
lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]
```

```
lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]
dframe=pd.DataFrame(lists,columns=['rank','name','age'])
print(dframe)
```

```
   rank name  age
0     1  aaa   22
1     2  bbb   25
2     3  ccc   24
```
